

The following Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") of Marengo Mining Limited ("Marengo" or the "Company") provides a discussion and analysis of the financial condition and results of operations to enable a reader to assess material changes in the financial condition of the Company between June 30, 2014, and June 30, 2015, and results of operations for the three and twelve months ended June 30, 2015, ("Q4 2015" and "FY 2015", respectively) and June 30, 2014, ("Q4 2014" and "FY 2014", respectively). The MD&A should be read in conjunction with the audited consolidated financial statements for the fiscal years ended June 30, 2015, and 2014. In this MD&A, references to "Company" or "Marengo" are references to Marengo Mining Limited and its wholly-owned subsidiaries.

The financial statements (and the financial information contained in this MD&A) were prepared in accordance with International Financial Reporting Standards ("IFRS").

All amounts in this discussion are expressed in millions of United States dollars ("USD") except per share data and unless otherwise indicated. All amounts in tables are expressed in thousands of USD, unless otherwise indicated.

This MD&A contains forward-looking information within the meaning of Canadian securities legislation (see "Forward-looking Information" below for a full discussion on the nature of forward-looking information). Information regarding the adequacy of cash resources to carry out the Company's exploration and development programs or the need for future financing is forward-looking information. All forward-looking information, including information not specifically identified herein, is made subject to cautionary language at the end of this document. Readers are advised to refer to the cautionary language included at the end of this MD&A under the heading "Forward-looking Information" when reading any forward-looking information. This MD&A is prepared in accordance with Form 51-102F1 and has been approved by the Company's board of directors (the "Board of Directors" or the "Board") prior to its release.

This report is dated as of September 22, 2015. Readers are encouraged to read the Company's other public filings, which can be viewed on the SEDAR website (www.sedar.com).

Company Overview

Marengo is an international mineral exploration and development company listed on the Toronto Stock Exchange (the "TSX") (Symbol: MRN) and the Port Moresby Stock Exchange Limited ("POMSoX") (Code: MMC). As of the date of this report, the Company requested approval from POMSoX for its removal from the Official List of POMSoX. Subject to POMSoX approval, the Company expects that its trading on POMSoX will be suspended on around close of trading on October 19, 2015. The Company's principal asset is its Yandera copper project (the "Yandera Project") in Papua New Guinea ("PNG"). The Company is currently focused on advancing the development of the Yandera Project into a commercially viable copper mining operation, with the objective to maximize shareholder value.

Between 2006 and 2014, the Company drilled 471 exploration, resource and geotechnical drill-holes and drove two adits (50 metres and 71 metres long) to test various mineralized zones across the Yandera Project. In September 2006 the Company commissioned a conceptual mining study (the "CMS") for the Yandera Project to include a preliminary mine design and open pit optimization, metallurgical testwork, plant flowsheet design and throughput options and capital and operating cost estimates. In July 2007 the CMS was completed and, based on the positive results thereof, the Company determined to proceed with a feasibility study. Phase 1 of the work to support a feasibility study was completed in April 2008 and comprised a comparative development options analysis study that delivered positive results.

Marengo commenced work on a feasibility study for the development of Yandera in 2008, based on its published copper resource, the prevailing copper price and the state of global financial markets at the time. Since then, global resource markets have become increasingly competitive, with, among other things, the copper price falling, funding for exploration and development decreasing and capital and operating costs escalating, bringing into question the economic viability of the development of the 2012 Yandera resource.

During the latter part of FY 2014, the new management team conducted a comprehensive evaluation and review of all aspects of the prior work conducted towards a feasibility study of the Yandera Project and concluded that, although progress had been made, further exploration and development work was required in order to finalize the feasibility study and, as a result of this review, the feasibility study has been deferred until further work is completed (see "Outlook" section).

Taking into account the 2015 updated resource estimate, the review of the 2012 resource, as well as further drilling, mapping and survey programs completed subsequent to the review that have yielded new mineralization, the Company has renewed enthusiasm about the potential of Yandera.

Overall Performance

Highlights of FY 2015 and as of the Date of this Report

During FY 2015 and to the date of this MD&A, the following highlights the Company's significant events:

- **Financing Activities** – The Company successfully completed two financing agreements with its major shareholder, which consists of three entities controlled by The Sentient Group, (collectively, "**Sentient**"), as follows:
 - On July 15, 2014, the Company closed a loan conversion and debenture purchase agreement (the "**Agreement**") with Sentient. Pursuant to the terms of the Agreement, the Company converted the principal amount and accrued interest on the previously outstanding loan from Sentient to the Company (\$3.1 million) to \$3.1 million aggregate principal amount of 9% senior unsecured convertible debentures of the Company (the "**July Debentures**") and also issued and sold an aggregate principal amount of \$7.1 million of July Debentures, inclusive of a \$0.1 million establishment fee, resulting in the issuance of debentures to Sentient in the aggregate principal amount of \$10.2 million.
 - On December 18, 2014, the Company completed an additional issuance of \$7.5 million principal amount of 9% unsecured convertible debentures, (the "**December Debentures**") to Sentient pursuant to debenture purchase agreement dated November 14, 2014.
- **Corporate Restructuring** – The Company made the following changes during the FY 2015 and to date of this MD&A:
 - On July 30, 2014, the Company announced the appointment of Mr. David Danziger as a director and Chairman of the Audit and Risk Committee effective immediately, filling the vacancy resulting from the resignation of director Ms. Elizabeth Martin. Mr. Danziger, CPA, CA, is the Senior Vice President of Assurance as well as the National Leader of Public Companies for MNP LLP, Chartered Professional Accountants. He has been an accounting professional since 1980, with extensive audit and compliance experience. He has served from time to time as a director of various TSX, TSXV, NYSE and AMEX listed public companies, a number of which are in the mining sector. Mr. Danziger is a past member of the Ontario Securities Commission's Small to Medium Sized Enterprise Advisory Committee and the CPA/PDAC IFRS Taskforce on Mining.
 - On August 20, 2014, the Company announced the resignation of Mr. Dean Richardson, Vice President of Investor Relations and Corporate Secretary.
 - On January 6, 2015, the Company announced the resignation of its Chief Operating Officer, Mr. John Mears. Mr. Mears continues to act as a technical advisor in a consulting role.
 - On January 6, 2015, the Board appointed Mr. Alex Dann, CFO of Marengo, as interim Corporate Secretary.
 - On May 1, 2015, Mr. Jon Powell joined the PNG team as a General Manager and subsequent to year end, as VP PNG Operations. Mr. Powell is an accomplished manager with over 25 years of international experience in the geophysical/mining exploration sector and has extensive background in global personnel management, logistics and operations.
 - On June 1, 2015, the Company hired Mr. Lachlan Reynolds as Business Development Manager and subsequent to year end, as VP Business Development. Mr. Reynolds, BSc, MAusIMM, MAIG is a geologist with over 24 year's experience in mineral exploration, development projects and mining operations internationally.
 - On June 2, 2015, the Company announced that it had officially delisted from the ASX and that Marengo securities will no longer be tradeable on the ASX.

- On July 1, 2015, Mr. Andre Wessels joined the Company' management team as VP Projects. Mr. Wessels, BEng, MBA, GAICD has over 23 years of experience in mining and related services, steel, financial services, and information and communication technology industries.
- On August 11, 2015, the Company announced that it had requested approval to delist from POMSoX. Subject to POMSoX approval, the Company expects that trading in Marengo's PETS PDIs will be suspended on POMSoX on around close of trading on October 19, 2015.
- **Exploration & Development Activities** – In keeping with the Company's objective of advancing and optimizing the Yandera Project economics and building on its resource potential, the following progress at the Company's PNG operations has been made:
 - On May 5, 2015, the Company announced an updated resource estimate for its Yandera Project resulting in additional and improved resources. Refer to Table 1 for details.
 - The Company completed four holes (totalling 1,004.6 metres) at the Yandera Project at its newly identified Rima prospect ("Rima").
 - The Company has previously described efforts to increase geological knowledge of the site and is pleased to report that this work has resulted in the identification of drilling targets that the Company is currently pursuing. Marengo's geologists have been equipped with advanced tools to analyse, model, interpret and assess the complex geology and mineralization. Training for geology and environmental staff continued during 2015, with more advanced tools expected to be added during the year. Transformation and development of both technical and operational teams is expected to continue throughout 2015.
 - Further to the comprehensive review completed during the latter part of FY 2014, as described in the "Company Overview" section above, as part of the new management's August 2014 review of the known resource it is emerging that a new structural model appears to control mineralization. This new understanding is being used by management with the objective of predicting new mineralization with the potential to increase the grade and scale of the resource. This new model has been used to great effect recently and has resulted in the discovery of mineralization of potentially higher grade outcrops at what is being called Rima Block. Extensive mapping and sampling in this new area has revealed potential wide zones of mineralization and alteration that exhibit abundant bornite and chalcopyrite within both potassic and phyllitic alteration zones.
 - In October 2014, the Company received confirmation from the Mineral Resources Authority that the license for its main tenement, Yandera, was successfully renewed until November 2015.

Yandera Project, Papua New Guinea

The Company's wholly-owned Yandera Project is located 95 kilometres southwest of the northern seaport of Madang in Papua New Guinea and situated within the highly prolific New Guinea Copper-Gold Belt that is host to many major producing mines. The Yandera porphyry system is located within the southern portion of the granted 624-square kilometre exploration licences that cover over 100 kilometres of strike over the highly prospective Bundi Fault zone.

On May 5, 2015, the Company announced an updated resource estimate for its Yandera Project. This resource estimate has been prepared pursuant to the requirements of National Instrument 43-101 - Standards of Disclosure for Mining Projects ("NI 43-101") and the Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves, 2012 Edition ("JORC").

Highlights of the Yandera Resource Estimate:

- Measured and Indicated Resources total 630 million tonnes grading 0.33% copper, 0.01% molybdenum and 0.07 ppm gold; or 0.41% copper equivalent (full breakdown by category is shown below);
- Inferred Resources total 117 million tonnes grading 0.30% copper, 0.005% molybdenum and 0.05 ppm gold; or 0.34% copper equivalent.

This 2015 Measured and Indicated copper-equivalent (CuEq) resource estimate for Yandera represents an update of the 2012 resource estimate, which was evaluated on a copper-only basis without the contributing value of ancillary molybdenum

(Mo) and gold (Au) that would be produced with the copper (Cu). Other enhancements of the 2015 resource estimate include:

- 1) Incorporation of positive infill/upgrade drilling results from the principal resource areas (Gremi, Imbruminda and Omora) and also at the Dimbi and Rima advanced exploration prospects;
- 2) Refinement of the resource tonnage from the addition of nearly 4,000 new density measurements;
- 3) A reconstruction of the geologic framework focused on host rock and structural controls from the first-time application of oriented drill core data.

Yandera is an igneous-hosted, structurally-controlled Cu-Mo-Au porphyry system comprised of a series of adjacent deposits along recognized structural trends. Mineralization is related to multiple pulses of intrusive rock and hydrothermal alteration. Grade has spatial correlation with late dacite intrusions and polymictic breccias with over-printing phyllitic alteration. Broad tabular zones of copper mineralization extend from surface to depths of over 500 metres and have been drill-defined to a strike length of over 5 kilometres.

The resource block model was informed by 35,250 samples from 553 drill holes at an average drill hole spacing of less than 30 metres in the principal resource areas (Gremi, Imbruminda and Omora) and less than 100 metres in other deposits within the model space.

Mineral resources were estimated by Ordinary Kriging using MineSight® software in 25 by 25 by 10 metre blocks (XYZ), constrained by grade shells based on a 0.15% Cu cut-off. Grade estimates within the grade shells were based on capped, five-metre composited assay data. Capping was conducted prior to compositing. The resource model was validated by visual inspection, statistical comparisons of block values to source data and comparison of Kriged results to other interpolation methods and swath plots. Resources were classified into Measured, Indicated and Inferred categories based on Canadian Institute of Mining, Metallurgy and Petroleum ("CIM") definition standards sufficient for NI 43-101 and JORC reporting.

In order to establish a reasonable prospect of eventual extraction in an open pit/sulfide flotation and oxide-leach context, the mineral resources presented above are reported within a potentially mineable pit configuration at a copper price of US\$3.50/lb Cu, a molybdenum price of US\$15/lb Mo and a gold price of US\$1500/oz Au; metallurgical recoveries of 90% for Cu, 85% for Mo and 65% for Au; mining cost of US\$2.50/tonne of material mined; and process and general and administrative costs of US\$10.00/tonne of material processed. Additional factors include a 2% royalty to the PNG government and a pit slope of 45 degrees.

The resources are reported within the pit configuration above using an internal copper-equivalent cut-off grade of 0.15% CuEq. The metal prices, recoveries and costs listed above were used to define copper-equivalent cut-off.

The metal ratios for reporting copper equivalent are:

$$CuEq = Cu\% + (Mo\% * 4.05) + (Au ppm * 0.45)$$

These metal ratios were developed using the metal prices and recovery assumptions listed above. Recoveries are based on metallurgical test work carried out by Marengo in 2011.

The Mineral Resource Statement, with an effective date of May 1, 2015, is presented in Table 1. The resource estimate has been reported as a total, and as oxide and non-oxide components, as these material types will have different metallurgy and will have different recovery characteristics and costs.

The estimate of mineral resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing or other relevant issues. The quantity and grade of reported Inferred resources in this estimation are uncertain in nature and there has been insufficient exploration to define these Inferred resources as an Indicated or Measured mineral resource and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured mineral resource category.

The Yandera Mineral Resource Statement was prepared by J.B. Pennington, MSc., C.P.G., and Justin Smith, BSc., P.E., both of SRK Consulting (U.S.), Inc., Reno, Nevada, and provides a classification of resources in accordance with CIM Standards on Mineral Resources and Mineral Reserves: Definitions and Guidelines, November 27, 2010.

For further information on the Yandera Project, please refer to the technical reports titled "Technical Report Updated Resource Estimate Yandera Copper Project Papua New Guinea" dated June 19, 2015, and "Yandera Copper Project, Madang Province, Papua New Guinea" dated April 2012, available on the Company's website and on SEDAR.

Table 1. - Mineral Resource Statement Effective May 1, 2015 for the Yandera Copper, Molybdenum, Gold Deposit, Madang Province, Papua New Guinea. (0.15 CuEq (%) Cutoff)

Zone	Classification	Metal Grades				Contained Metal					
		(kt)	Cu (%)	Mo (%)	Au (ppm)	CuEq (%)	Cu (kt)	Mo (kt)	Au (kg)	Au (koz)	CuEq (kt)

	Inferred	117,474	0.30	0.005	0.052	0.34	348	6	6,055	195	401
Oxide Resource	Measured	22,426	0.38	0.00	0.000	0.38	86	0	0	0	86
	Indicated	38,715	0.33	0.00	0.000	0.33	127	0	0	0	127
	Measured & Indicated	61,141	0.35	0.00	0.000	0.35	212	0	0	0	212
	Inferred	10,765	0.28	0.00	0.000	0.28	30	0	0	0	30
Non Oxide Resource	Measured	172,841	0.37	0.014	0.086	0.47	638	25	14,803	476	805
	Indicated	396,160	0.32	0.009	0.076	0.39	1,253	37	29,940	963	1,537
	Measured & Indicated	569,001	0.33	0.011	0.079	0.41	1,890	62	44,743	1,439	2,342
	Inferred	106,709	0.30	0.006	0.057	0.35	318	6	6,055	195	371

- Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. There is no certainty that any part of the Mineral Resources estimated will be converted into a Mineral Reserves estimate;
- Resources stated as contained within a potentially economically minable open pit; pit optimization was based on assumed copper, molybdenum, and gold prices of US\$3.50/lb, US\$15.00/lb, and US\$1,500.00/oz, respectively, recoveries of 90% for Cu, 85% for Mo, 65% for Au, a mining cost of US\$2.50/t, an ore processing cost of US\$10.00/t, and a pit slope of 45 degrees;
- Resources are reported using a 0.15 % CoG on an Equivalent Copper value that included process recoveries for metal;
- The CuEq was calculated using the formula CuEq = Cu% + (Mo% * 4.05) + (Au ppm * 0.45); and,
- Numbers in the table have been rounded to reflect the accuracy of the estimate and may not sum due to rounding.

Exploration and Development Activities for the Year Ended June 30, 2015

In the second quarter of FY 2014, following a review of the technical work conducted to date in support of a feasibility study for the Yandera Project, the board of directors of the Company decided that additional work was required in a number of specific areas before a feasibility study could be completed, including further optimization opportunities to enhance project economics, namely:

- As initial starter pit grades are insufficient to cover increased capex, revert to exploration in order to locate and improve existing grades;
- As waste to mineralized material strip ratios over inferred resource cause pit slopes to be steepened beyond design parameters with a loss of resources as a result, additional work was begun to identify new resources that may improve the waste to mineralized material ratios;
- New conceptual models are being developed that will in turn allow for the creation of new resource models. This may allow the identification of better or new high grade zones that may form the basis for a new mine plan;
- Identifying an alternative cost-competitive source of power for the Yandera Project after Marengo's preferred third party power provider withdrew from the proposed power supply arrangements;
- A review of processing plant throughput rates;
- Reviewing the option of Deep Sea Tailings Placement (DSTP) versus a land-based Tailings Management Facility (TMF); and
- Further optimization of the mine plan.

During the FY 2015 period and through the date of this MD&A, the Company is continuing the activities outlined above.

FY 2015 Exploration Program

As announced on November 17, 2014, the Company completed an initial drilling program at its newly identified Rima prospect in late 2014 (four-drill holes, for a total of approximately 1,005 metres).

Drilling Results at Rima Prospect

On March 12, 2015, the Company announced the results for the sampling and drilling results at Rima prospect. Rima is located approximately 700 metres to the northwest of the western edge of the Imbruminda resource area that forms part of the Yandera copper project (Figure 1). Rima was discovered in 2014 while geologists — following up on work completed in 2008 and 2009 — were mapping and sampling in creeks west of the Imbrum River. Surface sampling of some creeks in the Rima area revealed elevated copper content in grab and channel samples (Figure 2 and Table 2).

In late 2014, Marengo completed four drill holes (totalling 1004.6 metres) at Rima in search of higher grade copper mineralization to complement the current Yandera resource. The results (Tables 3–6) confirm the presence of higher grade mineralization.

The results at Rima are encouraging and suggest the presence of additional domains of near-surface higher grade copper mineralization that, collectively, may enhance the current Yandera resource estimate.

The Company has decided not to proceed with the remainder of the previously announced 10-hole drill program. Rather, it will be working towards completion of a more extensive field program during 2015, leading to a more comprehensive drill program in the future.

Table 2.–Results from Surface Samples at Rima. Coordinates are UTM in AGD 1966, Zone 55. “Rock” sample types were collected from a point at the respective Northing and Easting, and therefore do not have a width across which they were sampled.

*CuEQ% means copper equivalent percentage and is calculated using spot prices of \$2.60/lb Cu, and \$7.50/lb Mo which results in equation CuEQ% = Cu% + Mo%*2.885. In calculating the CuEQ%, Marengo assumes that it will be able to recover copper and molybdenum from mineral resources that may be identified in the Rima area. Testing on samples from the nearby Yandera resources suggest recoveries of these metals may be on the order of 91% for copper and 80% for molybdenum.

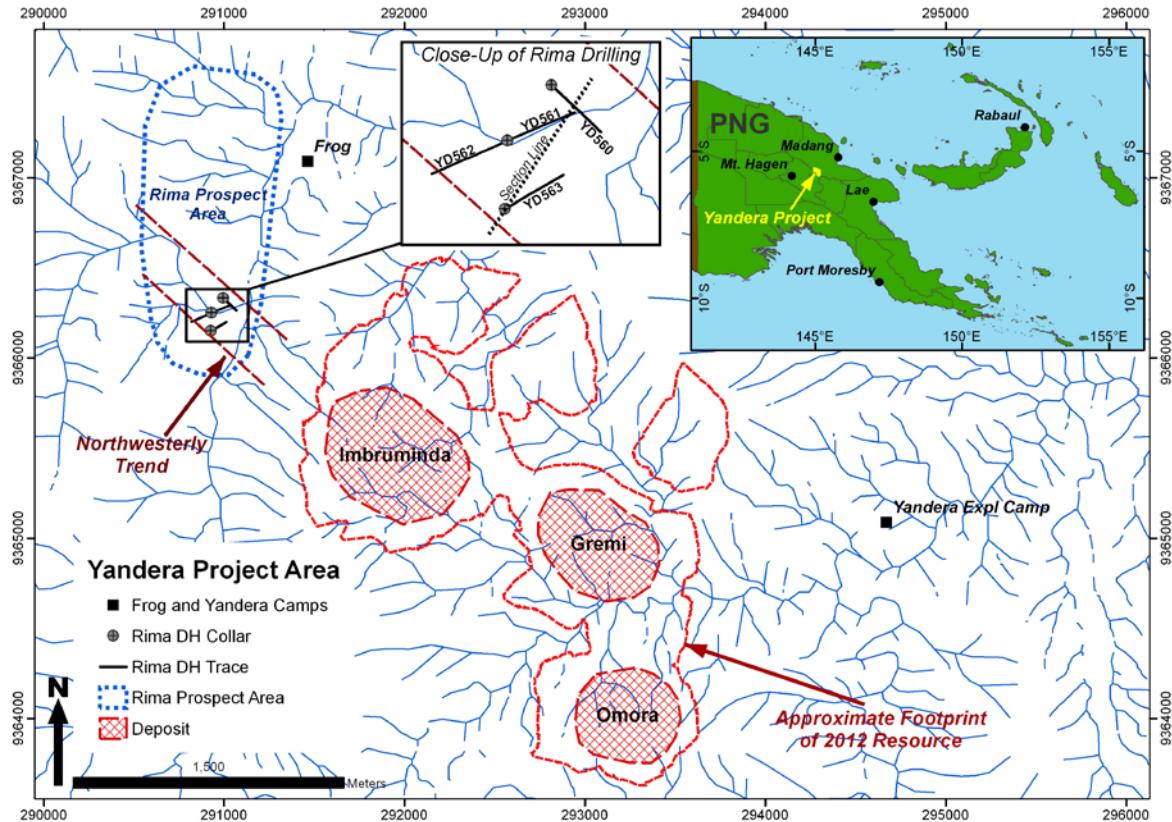

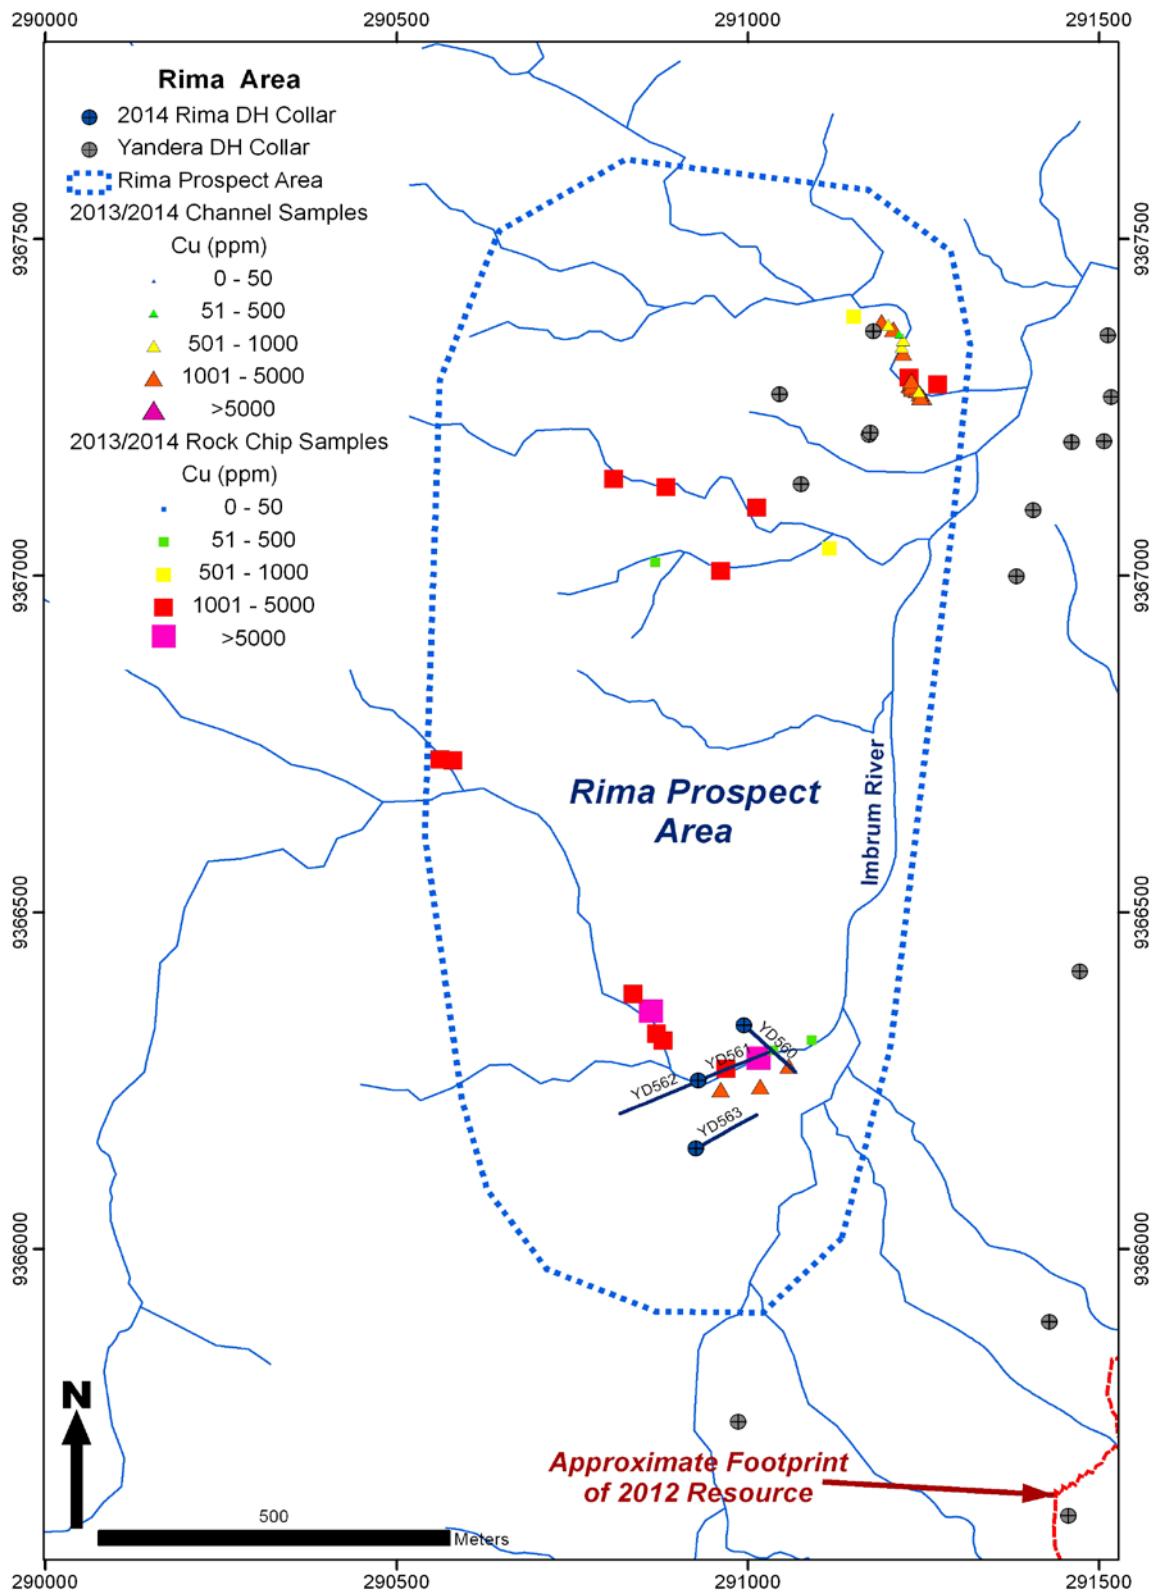

Figure 2. – Map of Recent Sampling at Rima

FY 2014 Dimbi Drilling Campaign

In September 2013, the Company initiated a planned nine-hole, approximately 2,000-metre diamond drill program targeting potential near surface resources at the Dimbi zone of the Yandera Central Porphyry System. The objective of the program was to identify near surface resources that could potentially enhance a starter pit for a Yandera mining operation. Due to the challenging terrain, the Dimbi zone had received less attention as an exploration target than the other zones (Gremi, Imbruminda and Omora) that make up the Yandera Central Porphyry System. As a result, a detailed field mapping program was mounted in mid-calendar year 2013 to improve the geological understanding of the Dimbi zone, the rock types and especially the nature, extent and orientation of recently identified outcropping mineralized structures (refer to Figure 3).

A fundamentally northwesterly striking structure, the Dimbi Fault, which dips at a high angle to the northeast, bounds the Dimbi zone on the southwest. This early fault established a conduit for mineralized fluid flow into the Dimbi zone, along a later set of northeast trending faults. Drill holes are testing projections of interpreted northeast striking mineralized structures in the hanging wall of the Dimbi Fault, as well as elevated copper intercepts in several existing holes nearby. An elongated copper-in-soil geochemical anomaly runs parallel to, and overlies, the hanging wall of the Dimbi Fault, reinforcing the logic of this current drilling strategy.

In December 2013, the Dimbi drilling campaign was completed. The results from the nine-hole (1,834-metre) drilling program indicated significant copper grades were intersected in seven drill holes; YD 551, YD 552, YD 553, YD 554, YD 556, YD 557 and YD 558. These drill holes were collared on the hanging wall of Dimbi Fault, which dips steeply northeast, and strikes northwest. (Refer to Figure 4).

The holes drilled at Dimbi during the 2013–14 campaign that intersected elevated copper grades (and also variously the other target metals, Mo, Ag and Au), are contained within a roughly rectangular 500-metre by 300-metre area with its long axis parallel to Dimbi Fault and sitting on the hanging wall. The table below is a summary of core sample analyses for the nine-hole campaign carried out in the fiscal year ended June 30, 2014.

The following two figures show additional resource targets (Figure 3) and a map of drill hole locations (Figure 4).

Figure 3. – Map Showing Additional Resource Targets Utilizing Proof of Concept Developed at Dimbi Zone

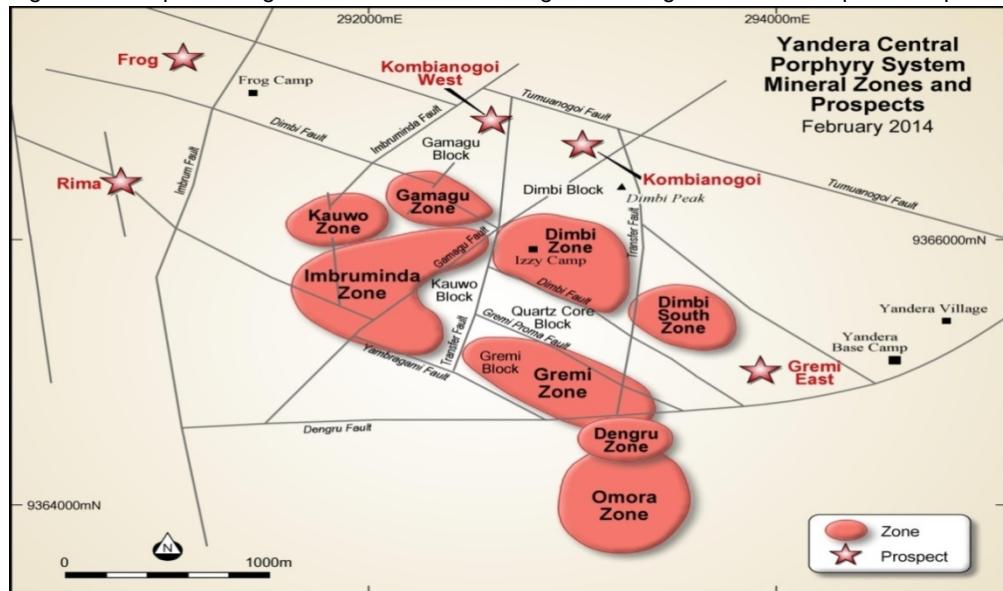

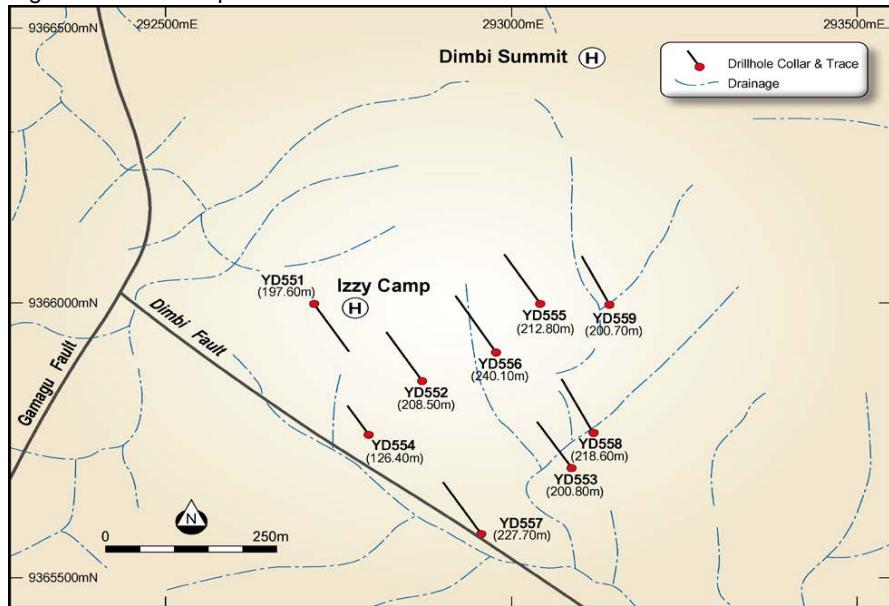

Figure 4. – Plan Map of the Drill Hole Locations

Work Program Outlook

Management recognizes that additional and improved resources are required to elevate the Yandera deposit to one that is economically robust and to justify proceeding with the feasibility study. To realize that objective the Company's planned work program going forward will comprise the following activities:

- Complete the metallurgical test work to confirm copper recovery from the oxide mineralization;
- Update the scoping study to incorporate processing of oxide mineralization as well as the expanded sulphide resource;
- Complete a two-staged exploration program aimed at further expansion of the resource through targeted infill and peripheral drilling; and
- Actively evaluate development options, including a combined oxide and flotation, deep sea tailings placement, power supply, transport road to Madang city and export facilities at Madang Port.

All work is focused on improving the economic viability of the Yandera Project.

Financial Capability

The Company is an exploration and development stage entity and has not yet achieved profitable operations. It is subject to risks and challenges similar to companies in a comparable stage of development. These risks include, but are not limited to, the challenges of securing adequate capital to fund its activities, operational risks inherent in the mining industry and global economic and commodity price volatility. The underlying value of the Yandera Project and the recoverability of the related capitalized costs are dependent on the Company's ability to successfully develop the Yandera Project by, among other things, securing necessary permits, obtaining the required financing to complete the development and construction and upon future profitable production from, or the proceeds from the disposition of, its mineral property.

For FY 2015, the Company incurred a comprehensive loss of \$26.1 million (FY 2014— \$32.8 million) and reported accumulated comprehensive losses of \$94.0 million (FY 2014— \$65.2 million). As at June 30, 2015, the Company had a working capital deficiency of \$40.5 million (FY 2014— \$19.9 million). The Company's sole source of funding during FY 2015 has been the issuances of convertible debt instruments to Sentient.

As at June 30, 2015, the Company had \$4.8 million in available cash and cash equivalents (June 30, 2014— \$0.4 million) and \$0.1 million in short term investments held as a restricted cash (June 30, 2014 — \$0.1 million). There are no sources of operating cash flows. Given the Company's current financial position and the ongoing exploration and evaluation expenditures on the Yandera Project, Marengo's major shareholder, Sentient has to date provided financial assistance to the Company. The section below under the header "*Liquidity and Capital Resources – Financing Activities*" sets out the details of the restructuring of the Company's financial commitments and financing transactions with Sentient.

The Company will need to raise additional capital through equity issuance or other available financing alternatives in parallel with financial support provided by Sentient in order to continue funding its operating, exploration and evaluation activities, and eventual development of the Yandera Project. Although the Company has been successful in its past fund-raising activities, there is no assurance as to the success of future fundraising efforts or as to the sufficiency of funds raised in the future.

These circumstances, along with other risks relevant to exploration companies, such as continuing losses, result in material uncertainty that lends significant doubt as to the ability of the Company to fulfil its exploration and development activities and, accordingly, the appropriateness ultimately of the use of the accounting principles applicable to a going concern.

Management expects that additional funding will be provided from Sentient or other sources, and therefore the Financial Statements have been prepared on the basis that the Company will continue as a going concern. The going concern bases of presentation assumes continuity of operations and realization of assets and settlement of liabilities in the normal course of business for the foreseeable future, which is at least, but not limited to, one year from June 30, 2015. Different bases of measurement may be appropriate when a Company is not expected to continue operations for the foreseeable future.

Annual Summary

The annual summary is set out in the following table. The amounts are derived from the consolidated financial statements prepared under IFRS.

<i>In thousands of US dollars, except per share amounts</i>	2015	2014	2013
Interest income	6	59	361
Other income (loss)	11,428	(1,578)	1,785
Loss from continuing operations	(6,039)	(13,648)	(8,027)
Loss per share (basic and diluted)	(0.01)	(0.01)	(0.07)
Total assets	149,900	162,303	182,470
Non-current financial liabilities	5,997	17,222	6,833
Investment in exploration and evaluation assets	4,669	8,616	30,293
Cash flows from financing activities, net of direct costs	14,161	8,529	36,144

Results of Operations

Other income (loss) is comprised of a gain (loss) resulting from the movement in fair value of the derivative liability in relation to the conversion option feature contained in the convertible debentures.

Net loss in FY 2015 of \$6.0 million was \$7.6 million lower than the loss of \$13.6 million in FY 2014. The lower loss in FY 2015 was primarily due to a gain on fair value of the derivative liability of \$11.4 million in FY 2015 compared to a loss of \$1.6 million in FY 2014 and lower general and administrative expenses (\$1.5 million lower year-over-year) resulting from terminations and the related severance expenses in FY 2014. The resulting reductions in FY 2015 were partially offset by higher interest / accretion expense on the convertible debentures (\$6.4 million higher year-over-year) and lower share-based compensation expense of nominal value in FY 2015 (less than \$0.1 million compared to a \$0.8 million recovery in FY 2014). The higher share-based compensation recovery during FY 2014 resulted from forfeited options and performance rights as well as adjustments related to management's estimated probability of the vesting conditions being met, which was re-assessed and reduced to 30% mainly due to terminations of staff as part of the closure of the Company's Perth office. In addition, exploration and evaluation write-offs and forfeited deposits were \$0.3 million lower in FY 2015 when compared to FY 2014.

Total Assets

Total assets during the FY 2015 period decreased by a net amount of \$12.4 million from the end of FY 2014. This decrease is largely attributed to a net increase in a negative currency translation adjustment of \$20.1 million arising from the translation of foreign denominated assets, mainly attributed to exploration and evaluation assets of \$20.2 million offset by an increase to cash and cash equivalents and short term investments position of \$4.4 million, net increase to exploration and evaluation assets of \$3.7 million and a reduction to other assets for a total of \$0.3 million.

Non-Current Liabilities

Non-current liabilities of \$6.0 million are comprised of the debt component of the convertible debentures issued to Sentient in December 2014. Non-current liabilities decreased by \$11.2 million during FY 2015 compared to the FY 2014 balance of \$17.2 million due to the reclassification of transactions completed on January 14, 2014, and July 15, 2014, to current liabilities due to the maturity dates of the debt which is June 30, 2016. All debt transactions were completed with the Company's major shareholder, Sentient. The section below under the header "*Liquidity and Capital Resources – Financing Activities*" sets out details of these transactions.

Investment in Exploration and Evaluation Assets

Investment in exploration and evaluation assets relates entirely to the Yandera Project. During FY 2015, the Company spent \$4.2 million offset by an increase of \$20.2 million in negative translation adjustments arising from the translation of a foreign denominated balance and write-down of exploration and evaluation assets by \$0.5 million resulting in a net reduction of \$16.5 million.

Cash Flows from Financing Activities

As a result of the debenture financing transactions with Sentient completed in July and December of 2014, the Company received net proceeds from borrowings of \$14.2 million during FY 2015. During FY 2014, net proceeds received from financing were \$8.5 million.

Quarterly Results of Operations

The results of operations for the eight most recently completed fiscal quarters are summarized in the following tables, which have been derived from the financial statements of the Company prepared in accordance with IFRS.

<i>In thousands of US dollars, except per share amounts</i>	2015	2015	2015	2015
	4 th quarter	3 rd quarter	2 nd quarter	1 st quarter

Total non-current financial liabilities	5,997	37,183	34,362	23,086

<i>In thousands of US dollars, except per share amounts</i>	2014	2014	2014	2014
	4 th quarter	3 rd quarter	2 nd quarter	1 st quarter
Statement of (Loss) / Profit				
Interest income	1	12	31	15
Other income (loss)	4,278	(5,962)	589	(462)
Net (loss)	(72)	(9,980)	(1,269)	(2,327)
Net (loss) per share — basic and diluted	(0.00)	(0.01)	(0.00)	(0.00)
Statement of Financial Position				
Cash, cash equivalents and short term investments	520	935	3,944	7,278
Total assets	162,303	141,090	164,561	161,154
Total non-current financial liabilities	17,222	15,256	14,967	14,273

Three Months Ended June 30, 2015, and June 30, 2014

Net income of \$6.6 million in Q4 2015 compared to a net loss of \$0.1 million in Q4 2014 resulted in an increase of \$6.7 million and was due to the following events:

- Finance costs in Q4 2015 of \$3.0 million were higher by \$0.6 million when compared to Q4 2014 finance costs of \$2.4 million. The increase resulted from higher debt loads compared to the prior year's quarter;
- Other income in Q4 2015 is comprised of a gain due to the movement in fair value of the derivative liability in relation to the conversion feature option contained in the convertible debentures. The fair value adjustment on the derivative liability contributed to a \$10.5 million gain in Q4 2015 compared to \$4.3 million gain in Q4 2014. The increased gain in Q4 2015 when compared to Q4 2014 is mainly due to the increased balance of the convertible debentures resulting from the issuance of new debentures in July 2014 and December 2014. Changes in fair value of the derivative liability are impacted by changes in assumptions and inputs used to determine the fair value, the most significant of which are the Company's share price, volatility and life of the options;
- General and administrative expenses in Q4 2015 of \$0.8 million were lower by \$1.3 million when compared to Q4 2014 of \$2.1 million. The reduction is primarily due to lower salaries of \$0.2 million in Q4 2015 resulting from a reduction in personnel and the closure of the Perth office, compared to \$1.4 million in Q4 2014;

- Exploration and evaluation assets write-offs during Q4 2015 were a \$Nil amount compared to \$0.2 million in Q4 2014; and
- Share-based payments were a nominal expense in Q4 2015 of less than a \$0.1 million compared to a recovery of \$0.4 million in Q4 2014.

Fiscal Year Ended June 30, 2015, Compared to Fiscal Year Ended June 30, 2014

The Company incurred a net loss of \$6.0 million for FY 2015 compared to a net loss of \$13.6 million in FY 2014 resulting in a decrease of \$7.6 million. The key items contributing to a lower loss in FY 2015 were the following expenditures:

- General and administration expenses of \$4.1 million in FY 2015 were lower by \$1.5 million when compared to the FY 2014 balance of \$5.6 million. The decrease is primarily due to lower corporate and administrative costs of \$0.4 million and reduction of salaries by \$1.1 million;
- Other gain of \$11.4 million in FY 2015 resulted from the fair value adjustment on the derivative liability compared to a loss of \$1.6 million in FY 2014. The increased gain in FY 2015 resulted from changes in fair value of the derivative liability, which are impacted by fluctuations in assumptions and inputs used to determine the fair value such as the Company's share price, volatility and life of the option; and
- Forfeited exploration and evaluation assets deposits were \$0.5 million in FY 2014 compared to a \$Nil amount of forfeitures in FY 2015.

The reductions of above expenditures were partially offset by the following higher expenditures in FY 2015 when compared to the corresponding period in FY 2014:

- Financing costs of \$12.7 million were higher by \$6.4 million when compared to the corresponding \$6.3 million expense in FY 2014. The increase resulted from higher debt loads compared to the prior year's period;
- Share-based payments were a nominal expense of less than \$0.1 million during FY 2015 compared to recovery of \$0.8 million in FY 2014. The higher recovery in FY 2014 resulted from forfeited options and performance rights as well as the probability of the vesting conditions being re-assessed and reduced from 100% to 30% mainly due to terminations of the staff in connection with the closure of the Company's Perth office; and
- Exploration and evaluation assets resulted in a \$0.5 million write-off during FY 2015 compared to \$0.2 million of write-offs in FY 2014.

Liquidity, Capital Resources and Going Concern

Liquidity

The main sources of liquidity are the Company's cash and cash equivalents, investments in term deposits, stock options exercises, equity issuances and debt instrument issuances. As at June 30, 2015, cash and cash equivalents were \$4.8 million compared to \$0.4 million at the end of FY 2014.

The Company's principal requirements for cash over the next twelve months will be to fund the ongoing exploration costs at the Yandera Project, general corporate and administrative costs and to service the Company's current obligations. The Company will defer discretionary expenditures, as required, in order to manage and conserve cash.

The financing transactions with Sentient completed on July 15 and December 18, 2014, respectively, improved the liquidity and increased the capital resources of the Company.

Working Capital

As at June 30, 2015, the Company had a working capital deficiency of \$40.5 million (June 30, 2014— \$19.9 million), calculated as total current assets less total current liabilities. The increase in working capital deficiency of \$20.6 million is mainly due to an increase in current liabilities by \$24.9 million due to the reclassification of the current portion from the long term debt of \$34.0 million offset by an increase to cash and cash equivalents of \$4.3 million, a decrease to payables and provisions by \$4.2 million and a decrease to derivative financial instrument by \$4.9 million.

As at June 30, 2015, the Company had current liabilities of \$45.6 million (June 30, 2014— \$20.7 million). This increase of \$24.9 million is due to an increase in the loans and borrowings amount of \$31.0 million offset by the decrease of the derivative financial instrument of \$4.9 million and a reduction in accounts payable, accrued liabilities and employee benefits of \$1.2 million.

Going Concern

The underlying value of the Company's exploration and evaluation assets is dependent upon the existence, and economic recovery of mineral reserves in the future and the ability of the Company to raise funds to continue and complete the development of the Yandera Project and to obtain all necessary permits. In addition, the Yandera Project may be subject to political and economic instability risks, unfavourable changes in existing government regulations, adverse metal market prices, etc.

As at June 30, 2015, the Company had no sources of operating cash flows and did not have sufficient cash to fund the development of the Yandera Project. The Company will need to raise additional capital through equity issuance or other financing alternatives in parallel with financial support provided by its major shareholder, Sentient, in order to continue funding its operating, exploration and evaluation activities, and the eventual development of the Yandera Project. Although, the Company has been successful in its past fundraising activities, there is no assurance as to the success of future fundraising efforts or as to the sufficiency of funds raised in the future. If funds are not raised, it would result in further curtailment of activities and Yandera Project delays.

These circumstances, along with other risks relevant to exploration companies, such as continuing losses, result in material uncertainty which lends significant doubt as to the ability of the Company to fulfil its exploration and development activities and, accordingly, the appropriateness ultimately of the use of the accounting principles applicable to a going concern.

Considering the risks listed above, management's balanced assessment of the Company is that it remains a going concern. The Company has been accounted for as a going concern in the Financial Statements.

The Company's contractual obligations as at the end of June 30, 2015, are set out below:

Contractual Obligations <i>In thousands of US dollars</i>	Total	Less than 1 year	1–2 years	After 2 years
Trade and other payables	1,749	1,749	-	-
Provisions	186	186	-	-
Derivative financial instrument	9,650	9,650	-	-
9% convertible debentures ⁽¹⁾	40,035	34,038	5,997	-
Total contractual obligations	51,620	45,623	5,997	-

⁽¹⁾ The 9% convertible debentures issued to Sentient represent unsecured debt. Debentures issued in January and July of 2014 mature on June 30, 2016, and debentures issued in December 2014 mature on June 30, 2017. The debt is convertible into common shares at the option of the holder, or repayable by the Company on the due date. The presentation shown above assumes payment is made in cash and also assumes no conversions of the 9% convertible debentures into common shares by the holders prior to the maturity date.

Financing Activities

On July 15, 2014, the Company completed the issuance of \$10.2 million principal amount of July Debentures to its major shareholder, Sentient, pursuant to the Loan Agreement (a loan conversion and debenture purchase agreement dated June 2, 2014, between the Company together with its wholly-owned subsidiaries Yandera Mining Company Limited and Marengo Mining (PNG) Limited, and Sentient).

Pursuant to the terms of the Loan Agreement, the Company: (i) converted the loan in the aggregate principal amount of \$3.0 million dated April 29, 2014, and due on December 31, 2014, along with interest of \$0.1 million thereon into July Debentures (9.0% senior unsecured convertible debentures of the Company) in the principal amount of \$3.1 million (the "Loan Debentures"); and (ii) issued and sold to Sentient July Debentures in the principal amount of \$7.0 million (the "Investment Debentures").

In connection with the transaction, the Company also paid to Sentient an establishment fee of 2% of the amount of Investment Debentures, which fee was satisfied by the Company through the issuance of \$0.1 million principal amount of 9%

senior unsecured convertible debentures (the "**Establishment Fee Debentures**", and together with the Loan Debentures and the Investment Debentures, the "**Debentures**"). In aggregate, the Company incurred \$0.3 million of financing costs directly attributable to this transaction, which were netted against the financial liability balance.

Consistent with the Company's accounting policy, the convertible debentures were initially measured at fair value, net of direct expenses, then subsequently at amortized cost. The fair value, net of direct costs of the convertible debentures issued on July 15, 2014 was \$5.2 million.

The Debentures issued in January and July of 2014 mature on June 30, 2016, (the "**Maturity Date**") and bear interest from and including the date of issuance at the rate of 9% per annum, payable on the Maturity Date. Interest payable on the Debentures will be paid by the Company through the issuance of additional debentures (the "**Interest Debentures**"), which will be issued in substantially the same terms as the Debentures.

The Debentures and Interest Debentures were convertible, at the option of Sentient, into common shares or Chess Depositary Interests ("**CDIs**") of the Company at a conversion price of C\$0.015 per common share or CDI. The conversion price of the Debentures and Interest Debentures will be adjusted in the event that there is a reorganization of capital or an issue of new common shares below the conversion price. The Debentures have been, and the Interest Debentures will be, jointly issued by the Company and the PNG Subsidiaries and are and will be, as applicable, guaranteed by Marengo Mining (Australia) Limited and Yandera Mining Company (Holdings) Pty Limited (both wholly-owned subsidiaries of the Company).

The transaction completed on July 15, 2014 resulted in a substantial modification of the terms of an existing convertible unsecured debentures issued on January 15, 2014. The conversion price was reduced from C\$0.02 to C\$0.015 and the maturity date of the loan dated April 29, 2014 was amended from December 31, 2014 to June 30, 2016. The modified terms significantly changed the discounted present value of cash flows. As a result, the existing debentures were extinguished in the amount of \$17.5 million and new fair value of the convertible debentures in the amount of \$14.9 million was recognized.

On December 18, 2014, the Company completed an additional issuance of \$7.5 million principal amount of convertible unsecured debentures to Sentient pursuant to the Agreement dated November 14, 2014, between the Company (together with its wholly-owned subsidiaries Yandera Mining Company Limited and Marengo Mining (PNG) Limited), and Sentient.

The December Debentures mature on June 30, 2017, and bear interest from and including the date of issuance at the rate of 9% per annum, payable on the Maturity Date.

The December Debentures are convertible, at the option of Sentient, into common shares or CDIs of the Company at a conversion price of C\$0.01 per common share or CDI. The conversion price of the Debentures will be adjusted in the event there is a reorganization of capital or an issue of new common shares below the conversion price.

The conversion price of all existing outstanding debentures of the Company held by Sentient pursuant to the terms of prior debenture financings between the Company and Sentient completed earlier this year was also adjusted to C\$0.01 per common share or CDI.

Consistent with the Company's accounting policy, the convertible debentures were initially measured at fair value, net of direct expenses, then subsequently at amortized cost. The fair value, net of direct costs of the convertible debentures issued on December 18, 2014, was \$5.0 million. The total accretion for the year ended June 30, 2015 amounted to \$1.0 million resulting in the closing balance of \$6.0 million as at June 30, 2015.

The transaction completed on December 18, 2014 further contributed to a substantial modifications of the terms of the existing convertible debentures issued on January 15, 2014 and July 15, 2014. The conversion prices were reduced from C\$0.015 to C\$0.01. The modified terms significantly change the discounted present value of cash flows. As a result, the existing debentures were extinguished and new fair values of the convertible debentures were recognized as follows:

The new fair of \$21.3 million of the convertible debentures issued on January 15, 2014 was recognized and the existing balance of \$19.1 million was extinguished. In aggregate, the total amounts resulting from the revaluations completed on July 15, 2014 and December 18, 2014 were \$36.3 million for initial recognition measured at fair value and \$36.6 million relating to extinguishment. The total accretion for the year ended June 30, 2015 amounted to \$8.2 million resulting in the closing balance of \$25.1 million as at June 30, 2015.

For the convertible debentures issued on July 15, 2014, the new fair value of \$7.6 million was recognized and existing balance of \$6.8 million was extinguished. The total accretion for the year ended June 30, 2015 amounted to \$2.9 million resulting in the closing balance of \$8.9 million as at June 30, 2015.

The total cumulative financing costs on convertible debentures recognized and expensed in the consolidated statements of loss and comprehensive loss was \$12.7 million for the year ended June 30, 2015, (June 30, 2014— \$6.3 million).

In summary, at June 30, 2015, as a result of financings and refinancing's with Sentient, the Company had (i) nil balance of the loan facility, initially due on December 31, 2014, and subsequently converted into Loan Debentures on July 15, 2015, as described above, (ii) \$34.0 million of convertible debentures resulting from an extinguishment of the original January and July Debentures due on June 30, 2016, and \$6.0 million of financial liability resulting from the issuance of new, the December Debentures. In addition, the Company had a derivative financial liability balance of \$9.7 million resulting from the conversion option feature contained in the debentures.

Uses of Cash

During FY 2015, the Company used \$5.0 million in operating activities, primarily for the payment of operating expenses such as salaries, and other general, corporate and administrative expenses. In addition, during FY 2015, the Company used net \$4.6 million in investing activities primarily to expenditures for the continuing exploration and development activities at the Yandera Project of \$4.7 million and utilized \$0.1 million from the short term investments. The Company also generated \$14.2 million in financing activities, representing the net proceeds from borrowings.

During FY 2014, the Company used \$6.1 million in operating activities and \$3.6 million in net investing activities, of which \$8.6 million was for exploration and development expenditures at the Yandera Project. The Company utilized \$4.9 million cash from the maturity of term deposits and \$0.1 million from interest earned. The Company also generated \$8.5 million in financing activities, representing the net proceeds from borrowings.

Commitments and Contingencies

The Company has certain commitments to meet the minimum expenditure requirements on the mineral exploration assets in PNG in which it has an interest. The Company expects to use the funds received from the issuance and sale of the December Debentures to meet these commitments.

The former Perth office in Australia represented a significant lease commitment in prior periods. The lease expired in FY 2014 and the office was closed. All other operating lease commitments relating to premises in PNG have also expired during FY 2014 and have not been renewed. Required premises in PNG are currently leased mainly on a month-to-month contract basis.

The Company had no contingent liabilities as at June 30, 2015.

Future minimum payments as at June 31, 2015, under agreements to which the Company is a party are as follows:

<i>In thousands of US dollars</i>	Less than 1 year	1–5 years	Total
Lease commitments	34	-	34
Exploration commitments	76	152	228
Total	110	152	262

Off-Balance Sheet Arrangements

There are no off-balance sheet arrangements as at June 30, 2015.

Critical Accounting Judgments, Estimates and Assumptions

The preparation of the consolidated financial statements in conformity with IFRS requires management to make judgments, estimates and assumptions that can affect reported amounts of assets, liabilities revenues and expenses and the accompanying disclosures. Estimates and assumptions are continuously evaluated and are based on management's historical experience and on other assumptions believed to be reasonable under the circumstances. However, different

judgments, estimates and assumptions could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the financial statements are:

Recoverability of Exploration and Evaluation Assets

The ultimate recoverability of the exploration and evaluation assets of \$144.3 million carrying value at June 30, 2015, is dependent upon the Company's ability to obtain the necessary financing and permits to complete the development and commence profitable production at the Yandera Project, or alternatively, upon the Company's ability to dispose of its interest therein on an advantageous basis. A review of the indicators of potential impairment is carried out at least at each period end.

Management undertakes a periodic review of these assets to determine whether any indication of impairment exists. Where an indicator of impairment exists, a formal estimate of the recoverable amount of the assets is made. An impairment loss is recognized when the carrying value of the assets is higher than the recoverable amount and when mineral license tenements are relinquished or have lapsed. In undertaking this review, management of the Company is required to make significant estimates of, among other things, discount rates, commodity prices, availability of financing, future operating and capital costs and all aspects of project advancement. These estimates are subject to various risks and uncertainties, which may ultimately have an effect on the expected recoverability of the carrying values of the assets.

Fair Value of Derivative Financial Instrument

The embedded derivative conversion option feature contained within the convertible debentures is valued using the Black-Scholes model. The inputs to this model are taken from observable markets where possible, but if this is not feasible, a degree of judgment is required in establishing fair values. The judgments include considerations of inputs such as expected volatility and the expected life of the conversion feature option. Changes in assumptions about these factors could affect the reported fair value of the derivative liabilities.

Valuation of Share-Based Compensation

The Company estimates the fair value of convertible securities such as warrants and options using the Black-Scholes option pricing model which requires significant estimation around assumptions and inputs such as expected term to maturity, expected volatility and expected forfeiture rates. The accounting policy in Note 2(e) as well as Note 14 of the Financial Statements contain further details of significant assumptions applied to these areas of estimation.

Transactions with Related Parties

The Company's related parties as defined by International Accounting Standard 24 "Related Party Disclosures" (IAS 24), include the Company's subsidiaries, executive and non-executive directors, senior officers and key management personnel. Transactions with related parties are measured at fair value, which is the amount of consideration established and agreed upon by the related parties. All related party transactions entered into by the Company have been approved by the Board of Directors of the Company and/or shareholders of the Company as required.

Key management personnel are defined as directors and senior officers of the Company.

Transactions with related parties during FY 2015 and FY 2014 were as follows:

(a) *Compensation of Key Management Personnel:*

In thousands of US dollars	For the years ended June 30,	
	2015	2014
Salaries, fees, wages and other benefits	1,081	1,346
Severances	667	1,709
Share-based compensation	5	-
Total	1,753	3,055

The severances result from changes in executive management.

(b) Transactions with Sentient

The Company entered into convertible debenture transactions and a loan facility conversion agreement with its major shareholder, Sentient. Details of these transactions are described in Note 11 of the Consolidated Financial Statements and under the heading "*Liquidity and Capital Resources – Financing Activities*" above.

Financial Instruments

In thousands of US dollars

	Fair Value at June 30, 2015	Basis of Measurement	Associated Risks
Cash and cash equivalents	4,831	Loans and receivables	Credit and foreign exchange
Short term investments - restricted cash	48	Loans and receivables	Credit and foreign exchange
Accounts receivable and other current assets	252	Loans and receivables	Credit, foreign exchange
Trade and other payables	1,749	Amortized cost	Foreign exchange
Provisions	186	Amortized cost	Foreign exchange
Derivative financial instrument	9,650	Fair value through profit and loss	Interest, foreign exchange
Loans and borrowings	40,035	Amortized cost	Interest, foreign exchange

Loans and receivables— Cash and cash equivalents, short-term deposits, accounts receivables and other current assets, trade and other payables and provisions mature in the short term and their carrying values approximate their fair values.

Amortized cost —The debt component of the convertible debentures subsequent to its initial recognition at fair value, is measured at amortized cost as described above.

Fair value through profit or loss —The debt component of the 9% convertible debentures is initially measured at fair value, net of direct expenses, through profit or loss, then subsequently at amortized cost. The convertible debentures contain embedded derivatives due to the conversion option feature that significantly modify the cash flows that otherwise would be required by the contract.

Embedded derivatives are segregated from the host liability debt component and accounted for separately. The conversion feature is recognized initially and subsequently at the end of each reporting period at fair value using the Black-Scholes option pricing model. Any changes in fair value of the derivatives are recognized as profit or loss in the consolidated statement of comprehensive loss. Up-front costs and fees related to the convertible debentures are netted against the loan liability balance.

The risk free interest rate used in the fair value computation is the interest rate on Canadian marketable bonds with maturity similar to the remaining life of the convertible debenture. The discount rate used is determined by adding management's estimate of the Company's risk premium to the risk free interest rate. Volatility is calculated based on the weekly volatility of the Company's share price observable on the Toronto Stock Exchange for a historical period equal to the remaining life of the 9% Convertible Debentures. For FY 2015, a revaluation gain of \$11.4 million was recorded.

Risk Management

The Company's exposure to financial instruments includes, but is not limited to, the following risks:

Interest Rate Risk

Interest rate risk is the risk that the future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company's 9% convertible debentures bear interest at a fixed rate and are not subject to changes in interest payments. The short term investments are held at highly-rated financial institutions and earn guaranteed fixed interest rate and thus are not subject to changes in interest payments.

Foreign Currency Exchange Rate Risk

Currency risk is risk that the fair value of future cash flows will fluctuate because of changes in foreign currency exchange rates. In addition, the value of cash and cash equivalents and other financial assets and liabilities denominated in foreign currencies can fluctuate with changes in currency exchange rates. The Company is also exposed to foreign exchange risk in the normal course of its business operations.

The Company undertakes transactions denominated in foreign currencies such as Canadian dollar, Australian dollar and Papua New Guinea kina, and consequently is exposed to exchange rate risks. Exchange risks are managed by matching levels of foreign currency balances and related obligations and by maintaining operating cash accounts in non-US dollar currencies. The rate published by the Bank of Canada at the close of business on June 30, 2015, was 1.2490 USD to CAD, 0.7655 AUD to USD and 0.3534 PGK to USD (June 30, 2014 - 1.0671 USD to CAD, 0.9419 AUD to USD and 0.4031 PGK to USD). Based on the balances at June 30, 2015, total loss would change by approximately \$17 thousand given a 5% increase or decrease in the CAD, AUD and PGK currencies to USD dollar.

As at June 30, 2015, the cash and cash equivalents and short term investments are denominated in the following currencies:

<i>In thousands of US dollars</i>	As at June 30,	
	2015	2014
Denominated in US dollars	4,395	217
Denominated in Canadian dollars	304	140
Denominated in Australian dollar	69	97
Denominated in Papua New Guinea kina	111	66
Total cash and cash equivalents and short term investments	4,879	520

Credit Risk

Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation. The Company's credit risk is primarily associated with liquid financial assets. The Company limits exposure to credit risk on liquid financial assets by holding cash, cash equivalents, restricted cash and deposits at highly-rated financial institutions.

Liquidity Risk

Liquidity risk is the risk that the Company will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset. The Company manages the liquidity risk inherent in these financial obligations by regularly monitoring actual cash flows to annual budget which forecast cash needs and expected cash availability to meet future obligations.

The Company will need to raise additional capital through equity issuances or debt financing in order to continue funding its operations, exploration and evaluation activities and for the eventual development of the Yandera Project.

Capital Risk Management

The Company manages its capital to ensure that it will be able to continue as a going concern, so that adequate funds are available or are scheduled to be raised to carry out the Company's exploration program and to meet its ongoing administrative costs. This is achieved by the Board of Directors' review and acceptance of a budget that is achievable within existing resources and the timely matching and release of the next stage of expenditures with the resources made available from capital raisings and debt funding from related parties. In doing so, the Company may issue new shares, or restructure or issue new debt.

The Company is not subject to any externally imposed capital requirements imposed by a regulator or a lending institution.

In the management of capital, the Company includes the components of equity, loans and borrowings, net of cash and cash equivalents.

In thousands of US dollars	As at June 30,	
	2015	2014
Equity	98,280	124,389
Current debt	45,623	20,692
Long term debt	5,997	17,222
	149,900	162,303
Cash and cash equivalents	(4,831)	(421)
Investments - term deposits ⁽¹⁾	(48)	(99)
	145,021	161,783

⁽¹⁾ At June 30, 2015, the Company set aside \$0.1 million (June 30, 2014 - \$0.1 million) as restricted cash in term deposits relating to the bank guarantees with a third-party supplier.

Future Accounting Standards and Pronouncements

IFRS 9 "Financial Instruments"

IFRS 9 Financial Instruments, addresses classification and measurement of financial assets. It replaces the multiple category and measurement models in IAS 39, financial instruments — Recognition and Measurement, for debt instruments with a new mixed measurement model having only two categories: amortized cost and fair value through profit and loss. IFRS 9 also replaces the models for measuring equity instruments. Such instruments are either recognized at fair value through profit or loss or at fair value through other comprehensive income. Where equity instruments are measured at fair value through other comprehensive income, dividends are recognized in the statement of earnings to the extent that they do not clearly represent a return of investment; however, other gains and losses (including impairments) associated with such instruments remain in accumulated comprehensive income indefinitely. Requirements for financial liabilities were added to IFRS 9 in October 2010 and they largely carried forward existing requirements in IAS 39 except that fair value changes due to credit risk for liabilities designated at fair value through profit and loss are generally recorded in other comprehensive income. This standard is effective for annual periods beginning on or after January 1, 2018. The Company is still assessing the impact of this standard.

IAS 16 "Property, Plant and Equipment" (IAS 16)

The International Accounting Standards Board ("IASB") has published Clarification of Acceptable Methods of Depreciation and Amortisation (Amendments to IAS 16 and IAS 38). The amendments provide additional guidance on how the depreciation or amortisation of property, plant and equipment and intangible assets should be calculated. They are effective for annual periods beginning on or after 1 January 2016, with earlier application being permitted. The Company is still assessing the impact of this standard.

Amendments

The requirements of IAS 16 are amended to clarify that a depreciation method that is based on revenue that is generated by an activity that includes the use of an asset is not appropriate. This is because such methods reflects a pattern of *generation* of economic benefits that arise from the operation of the business of which an asset is part, rather than the pattern of *consumption* of an asset's expected future economic benefits.

IAS 1 - "Presentation of Financial Statements" (IAS 1)

The IASB has published Disclosure Initiative (Amendments to IAS 1). The amendments aim at clarifying IAS 1 to address perceived impediments to preparers exercising their judgement in presenting their financial reports.

Amendments

Disclosure Initiative (Amendments to IAS 1) makes the following changes:

- **Materiality.** The amendments clarify that (1) information should not be obscured by aggregating or by providing immaterial information, (2) materiality considerations apply to the all parts of the financial statements, and (3) even when a standard requires a specific disclosure, materiality considerations do apply.
- **Statement of financial position and statement of profit or loss and other comprehensive income.** The amendments (1) introduce a clarification that the list of line items to be presented in these statements can be disaggregated and aggregated as relevant and additional guidance on subtotals in these statements and (2) clarify that an entity's share of OCI of equity-accounted associates and joint ventures should be presented in aggregate as

- single line items based on whether or not it will subsequently be reclassified to profit or loss.
- **Notes.** The amendments add additional examples of possible ways of ordering the notes to clarify that understandability and comparability should be considered when determining the order of the notes and to demonstrate that the notes need not be presented in the order so far listed in paragraph 114 of IAS 1. The IASB also removed guidance and examples with regard to the identification of significant accounting policies that were perceived as being potentially unhelpful.

The amendments are effective for annual periods beginning on or after 1 January 2016. Earlier application is permitted. The Company is still assessing the impact of this standard.

Risk and Uncertainties

There are a number of risks that may have a material and adverse impact on the future operating and financial performance of Marengo and the value of the common shares of the Company. These include risks that are widespread risks associated with any form of business and specific risks associated with Marengo's business and its involvement in the exploration and mining industry generally and in PNG in particular. Please see "Papua New Guinea" in the Company's annual information form dated September 22, 2015, (the "AIF"), a copy of which is available on SEDAR at www.sedar.com. While most risk factors are largely beyond the control of Marengo and its directors, the Company will seek to mitigate the risks where possible, for example by maintaining its key relationships with PNG's federal and regional governments and local people. However, an investment in the common shares of the Company is considered speculative due to the nature of Marengo's business and the present stage of its development.

The Company is subject to the following risks and uncertainties, which are discussed in detail in the AIF, available on SEDAR at www.sedar.com, and should be reviewed in conjunction with this document:

- The Company has negative operating cash flows and might not be able to continue as a going concern;
- The Company will require additional funding in the future and no assurances can be given that such funding will be available on the terms acceptable to the Company or at all;
- The Company's ability to maintain its obligations under the terms of its convertible debentures and other debt obligations;
- The speculative nature of resource exploration and development projects;
- The uncertainty of mineral resource estimates and the Company's lack of mineral reserves;
- The Company's ability to successfully establish mining operations and profitably produce copper, molybdenum and gold;
- Dependence on the Yandera Project;
- Operations of the Company are carried out in geographical areas that are subject to various other risk factors;
- The economic uncertainty of operating in a developing country such as PNG, such as the availability of local labour, local and outside contractors and equipment when required to carry out the Company's exploration and development activities;
- Other foreign operations risks; potential changes in applicable laws and government regulations and potential changes in PNG's mining or investment policies;
- The Company is not insured against all possible risks;
- Environmental risks and hazards;
- The title of the Company's mineral properties cannot be guaranteed and may be subject to prior unregistered agreements, transfers and other defects, and the risk of obtaining a mining permit and the successful renewal of currently pending renewal applications;
- The commodity prices may affect the Company's value, changes in and volatility of commodity prices and its hedging policies;
- Increased competition in the mineral resource sector;
- The Company may have difficulty recruiting and retaining key personnel;
- Currency fluctuations risk;
- Repatriation of earnings, no assurances that PNG or any other foreign country that the Company may operate in the future will not impose restrictions on repatriation of earnings to foreign entities;
- No production revenues;

- Stock exchange prices;
- Conflicts of interest;
- Ability to exercise statutory rights and remedies under Canadian securities law;
- Enforceability of foreign judgements;
- Unforeseen litigation;
- Structural subordination of the Company's common shares;
- The Company's future sales or issuance of common shares;
- Risk of suspension of public listing due to failure to comply with local securities regulations;
- Risk of fines and penalties; and
- Risk of improper use of funds in local entity.

Share Capital Information

As at the date of this MD&A, the following number of common shares of the Company and other securities of the Company exercisable for common shares of the Company are outstanding:

Securities	Common shares on exercise
Common shares	1,137,870,521
Stock options	11,475,000
9% Convertible debentures	6,004,243,120
Fully diluted share capital	7,153,588,641

Corporate Responsibility for Financial Reports

Disclosure Controls

Disclosure controls and procedures have been designed to ensure that information required to be disclosed by the Company is accumulated and communicated to Management as appropriate to allow timely decision-making regarding required disclosures. The Company's CEO and CFO have concluded, based on their evaluation of the effectiveness of the Company's disclosure controls and procedures, that these controls and procedures provide reasonable assurance that material information is made known to them by others within the Company. However, a control system, no matter how well conceived, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

Internal Control over Financial Reporting

The Company's CEO and CFO are responsible for establishing and maintaining adequate internal control over financial reporting ("ICFR"). The Company's ICFR is intended to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with applicable IFRS. The Company's ICFR includes policies and procedures that:

- Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of assets;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with IFRS, and that receipts and expenditures are being made only in accordance with authorizations of the Company's Management and Board; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of assets that could have a material effect on the financial statements.

Any disclosure control and procedures or ICFR, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to error, collusion, or improper override. Because of the inherent limitations in all control systems, there is a risk that misstatements due to error or fraud may occur and not detected on a timely basis.

Management, including the CEO and CFO, has assessed the effectiveness of internal controls over financial reporting as of June 30, 2015, and concluded, subject to the limitations noted above, that the Company has sufficient controls to meet the requirements as stated above.

Changes in Internal Controls

There have been no significant changes to internal controls in the year ended June 30, 2015.

Changes in Internal Control over Financial Reporting

There have been no changes in the Company's design of internal controls and procedures over financial reporting that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting during the period covered by this MD&A.

Forward-looking Information

Certain information in this MD&A, including all statements that are not historical facts, constitutes forward-looking information within the meaning of applicable Canadian securities laws. Such forward-looking information includes, but is not limited to, information that reflects management's expectations regarding Marengo's future growth, results of operations (including, without limitation, future production and capital expenditures), performance (both operational and financial) and business prospects (including the timing and development of new deposits and the success of exploration activities) and opportunities. Often, this information includes words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate" or "believes" or variations of such words and phrases or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved.

In making and providing the forward-looking information included in this MD&A, the Company has made numerous assumptions. The assumptions include, among other things, assumptions regarding: (i) the accuracy of exploration results received to date; (ii) anticipated costs and expenses; (iii) the accuracy of the Company's mineral resource estimate; (iv) the future price of copper, molybdenum and gold; and (v) that the supply and demand for copper, gold, molybdenum, and other metals develop as expected. Although management believes that the assumptions made and the expectations represented by such information are reasonable, there can be no assurance that the forward-looking information will prove to be accurate. By its nature, forward-looking information is based on assumptions and involves known and unknown risks, uncertainties and other factors that may cause the Company's actual results, performance or achievements, or industry results, to be materially different from future results, performance or achievements expressed or implied by such forward-looking information. Such risks, uncertainties and other factors include, among other things, the following: (i) need for additional financing to develop the Yandera Project; (ii) decreases in the price of copper and molybdenum; (iii) exploration risk; (iv) the risk that the Company will not be able to obtain or renew the requisite permits and licenses to carry out its planned exploration activities; (v) dependence on the Yandera Project; (vi) PNG State equity interest; and (vii) the ability of the Company to satisfy its debt obligations.

The Company's AIF dated September 22, 2015, contains additional information on risks, uncertainties and other factors relating to the forward-looking information. Although the Company has attempted to identify factors that would cause actual actions, events or results to differ materially from those disclosed in the forward-looking information, there may be other factors that cause actual results, performances, achievements or events not to be as anticipated, estimated or intended. Also, many of the factors are beyond the Company's control. Accordingly, readers should not place undue reliance on forward-looking information. The Company undertakes no obligation to reissue or update forward-looking information as a result of new information or events after the date of this MD&A except as may be required by law. All forward-looking information disclosed in this MD&A is qualified by this cautionary statement.

Additional Information

Additional information about the Company and its business activities is available under the Company's profile on the Canadian SEDAR website at www.sedar.com.

Qualified Person and Technical Information

The scientific and technical information contained in this MD&A was prepared by or under the supervision of and reviewed and approved by Dr. Nathan Chutas. Dr. Chutas is a Certified Professional Geologist with the American Institute of Professional Geologists in the US and he provides technical advisory consultancy services to Marengo. Dr. Chutas is a

“Qualified Person” as defined by NI 43-101. Dr. Chutas verified the data underlying the information in this MD&A.

For further information relating to the Yandera Project, please see the technical report titled “Technical Report Updated Resource Estimate Yandera Copper Project Papua New Guinea” dated June 19, 2015 prepared by SRK Consulting (U.S.) Inc. which is available under the Company’s issuer profile on SEDAR at sedar.com.
